EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee. Authorization for this examiner's amendment was given in a telephone interview with Michael N. Mercanti on 16 September 2008. The application is amended as follows:

In the claims replace line 1 to read as follows:

Please cancel claims 1 - 18.

Cancel claims 19-24.

Replace claim 25 with the following:

25. A method for calibrating an air mass sensor, comprising the steps of:

a) arranging a mass flow sensor to be calibrated in a flow channel which comprises a pump at one end and an inlet opening for a gas which is conveyed through the flow channel with the aid of the pump at its other end; a variable nozzle located between the mass flow sensor and the pump, said nozzle having a conically widening portion and a spike which is arranged in the portion and which can be adjusted in the portion by means of an actuator in order to change the free cross section in the portion, and the spike of said nozzle being continuously adjustable during a calibrating operation on the basis of a predetermined time/displacement profile by means of a control device;

b) generating a mass flow, corresponding to a mass flow/time profile, in the flow channel on the basis of the predetermined time/displacement profile of the control device;

c) continuously adjusting the position of the spike of the variable nozzle in accordance with the time/displacement profile in such a manner that a flow with the speed of sound is generated

at the narrowest cross section of the variable nozzle during operation of the pump; and

d) measuring, using the air mass flow sensor, the flow conditions in order to calibrate the air mass flow sensor.

Add new claims 26-30 as follows:

26. The method according to Claim 25, wherein the spike has the form of a cone or truncated cone which is arranged centrally in the portion.

27. The method according to Claim 26, wherein the spike's position is adjustable along a longitudinal axis.

28. The method according to Claim 25, wherein the flow conditions comprise temperature, relative atmospheric humidity, and/or pressure.

29. The method according to Claim 26, wherein the flow conditions comprise temperature, relative atmospheric humidity, and/or pressure.

30. The method according to Claim 27, wherein the flow conditions comprise temperature, relative atmospheric humidity, and/or pressure.

2. The following is an examiner's statement of reasons for allowance:

The adjustable spike apparatus is generally known in the art as can be found in the cited references including United States Patent 3,896,670 to Converse, III *et al.* The prior art device to Converse, III *et al.* does not teach using the apparatus to calibrate a sensor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
